# **Challenges to Enhanced Reliance on Third Party Reimbursement for HIV Testing in the District of Columbia**

# Skillicorn J, Castel AD, Markus A

Milken Institute School of Public Health at The George Washington University

RESULTS

Resource Constraint Barriers

#### BACKGROUND

· Until recently, the costs of HIV testing have largely been covered by the CDC, departments of health, and local clinics and organizations.

· This resource climate however is changing due to Affordable Care Act (ACA) provisions through which health care coverage has been expanded and third party payers are now required or incentivized to cover many preventive services including HIV testing.

· In DC, the Department of Health (DOH) has provided strong categorical support for testing through grant funding and free rapid test kits. Through new funding opportunities, DOH is incentivizing sites to seek third party reimbursement (TPR).

#### **OBJECTIVES**

 To explore how primary care clinics in DC are making a transition from categorical support to TPR for HIV testing and associated barriers and facilitators

#### **METHODS**

· Relied on an implementation science framework to guide this single case study's exploration of the funding transition.

· Used purposeful sampling to identify key informants and their organizational affiliations.

· Utilized an embedded case study design that incorporated 3 sub-units of analysis including:

- $\circ$  DC government representatives n = 5
- TPR stakeholders n = 5
- o DOH-supported primary care providers n =18

· Selected 4 clinics based on following criteria:

- Number of clinic patients
- Availability of dedicated resources for HIV testing
- Testing models and their implications for billing and reimbursement.

### RESULTS

| Barriers Related to Receipt of Third Party<br>Reimbursement |   |  |
|---|---|--|
| Technology  | Rapid testing results in more<br>challenges to TPR than<br>conventional testing<br>incorporated into a clinical<br>standard of care |  |
| Categorical<br>Funding                                      | Clinics indicated inability to<br>bill for free rapid testing from<br>DC DOH (double dipping)                                       |  |
| Limited<br>Reimbursement                                    | Testing resulted in<br>reimbursement between<br>\$0.00 - \$16.80 and did not<br>cover staffing and counseling                       |  |
| Staffing Model  | TPR typically does not cover<br>testing conducted by non-<br>credentialed staff   |  |

| Third Party Reimbursement Barriers by Payer<br>Type |   |  |
|---|---|--|
| Medicaid<br>FQHC                                    | <ul> <li>Flat encounter rate resulting in no<br/>additional revenue - disincentive<br/>for clinics to use preferred testing<br/>technology</li> <li>No process in place through Dept.<br/>of Health Care Finance (DHCF) to<br/>request a Change in Scope to<br/>receive an enhanced rate</li> </ul> |  |
| Medicaid<br>Non-FQHC                                | <ul> <li>Bundled rates resulting in no<br/>additional revenue</li> </ul>  |  |

DC Alliance o Flat encounter rate No coverage determination for routine testing

Medicare Flat encounter rate No coverage determination for routine testing (policy changed after interviews)

 Variance in what plans will cover, Private minimal ability to negotiate, limited transparency Bundled rates

| Categorical<br>Funding             | Decline in categorical support<br>resulting in decreased testing<br>or increased reliance on<br>general operating funds   |  |  |
|------------------------------------|---|--|--|
| Revenue Portfolio                  | Variation in the diversity of<br>revenue streams; shift from<br>strong reliance on grants and<br>contracts to a growing reliance<br>on TPR  |  |  |
| TPR Infrastructure<br>and Staffing | Short history of TPR, few<br>insurance plans accepted,<br>limited staff for billing   |  |  |
|                                    |   |  |  |
| Organizational Su                  | pport Barriers  |  |  |
| Leadership                         | Variation in degree of<br>awareness of testing program<br>and importance to<br>organizational mission; reliance<br>on staff champions at all clinics  |  |  |
| Adaptability to<br>Change          | Variation in commitment for<br>identification of alternative<br>resources to support testing  |  |  |
| Communication B                    | arriers   |  |  |
| DOH and Clinics                    | <ul> <li>Clinics had desire for<br/>stronger support related to<br/>TPR implementation</li> <li>DOH perception that clinics<br/>could do more to incorporate<br/>routine testing as part of<br/>standard of care</li> </ul> |  |  |
| DHCF, DOH and<br>Clinics           | o Limited communication   |  |  |
| Medicaid                           | <ul> <li>Clinics indicated limited</li> </ul>   |  |  |

| Medicaid          | 0 | Clinics indicated limited       |
|-------------------|---|---------------------------------|
| Managed Care      |   | ability to negotiate contract   |
| Organizations     | 0 | Proprietary nature of           |
| (MCO) and Clinics |   | contracts made it difficult for |
|                   |   | transparency                    |

# RECOMMENDATIONS

| Policy Recommendations for DHCF  |   |  |  |  |
|--|---|--|--|--|
| Local review of<br>DC FQHCs to<br>assess current<br>encounter rate   | <ul> <li>Develop process for<br/>requesting a Change in<br/>Scope to increase encounter<br/>rate</li> <li>Explore adoption of<br/>Alternative Payment<br/>Methodology that could<br/>incentivize and reward<br/>outcomes rather than<br/>reimbursement by encounter</li> </ul>            |  |  |  |
| Enhance<br>requirements for<br>DC Medicaid<br>MCOs   | <ul> <li>Increase underlying primary care visit rate for bundled plans</li> <li>Improve transparency of TPR methodology</li> </ul>  |  |  |  |
| Adopt Centers<br>for Medicare and<br>Medicaid<br>Services (CMS)<br>policy allowing<br>Medicaid fee for<br>service coverage<br>by non-<br>credentialed<br>providers | <ul> <li>Develop a State Plan<br/>Amendment (SPA) to allow<br/>coverage for non-credentialed<br/>providers</li> <li>Require Medicaid MCOs to<br/>align their policies to updated<br/>SPA</li> </ul>   |  |  |  |
| providero  |   |  |  |  |
| Programmatic Re  | commendations   |  |  |  |
| Expand DOH's<br>support to<br>facilitate TPR of<br>HIV testing   | <ul> <li>Request more support from<br/>CDC and other technical<br/>providers</li> <li>Partner with DHCF to adopt<br/>CMS policy</li> </ul>  |  |  |  |
| Strengthen<br>communication<br>between<br>stakeholders   | <ul> <li>Improve communication<br/>between DOH, DHCF,<br/>clinics, and MCOs</li> </ul>  |  |  |  |
| Clinic<br>assessment of<br>TPR and HIV<br>testing strategies   | <ul> <li>Implement a Revenue Cycle<br/>Group that conducts an<br/>ongoing assessment of<br/>current revenue streams,<br/>TPR infrastructure and<br/>capacity, and changes<br/>resulting from ACA</li> <li>Assess best way to<br/>incorporate testing as a<br/>standard of care</li> </ul> |  |  |  |

standard of care

## CONCLUSIONS

- · Clinics face numerous challenges as they transition from strong DC DOH support for HIV testing to a stronger reliance on TPR.
- The engagement of DHCF, DC DOH and clinics in the adoption of various policy and programmatic recommendations could mitigate current challenges and facilitate a stronger reliance on TPR moving forward.

#### LIMITATIONS

· Small sample size

· Limited ability to uncover contractual reasons for when payment for testing is separated out and when it is bundled with other services

· Limited generalizability

# **STRENGTHS**

· Highlighted different perspectives and operational issues through the triangulation of data from different sources of evidence and across stakeholders

· Serves as an illustrative case study with implications for other jurisdictions, other preventive services, and reimbursement models and reform options

ACKNOWLEDGEMENTS:

This project fulfilled requirements for the degree of Doctor of Public Health from the GW Milken Institute School of Public Health Funding from the GW Milken Institute SPH Capital Connection Fund Research Award supported this project.
