

The South Carolina Rural-Urban HIV Cascade of Care

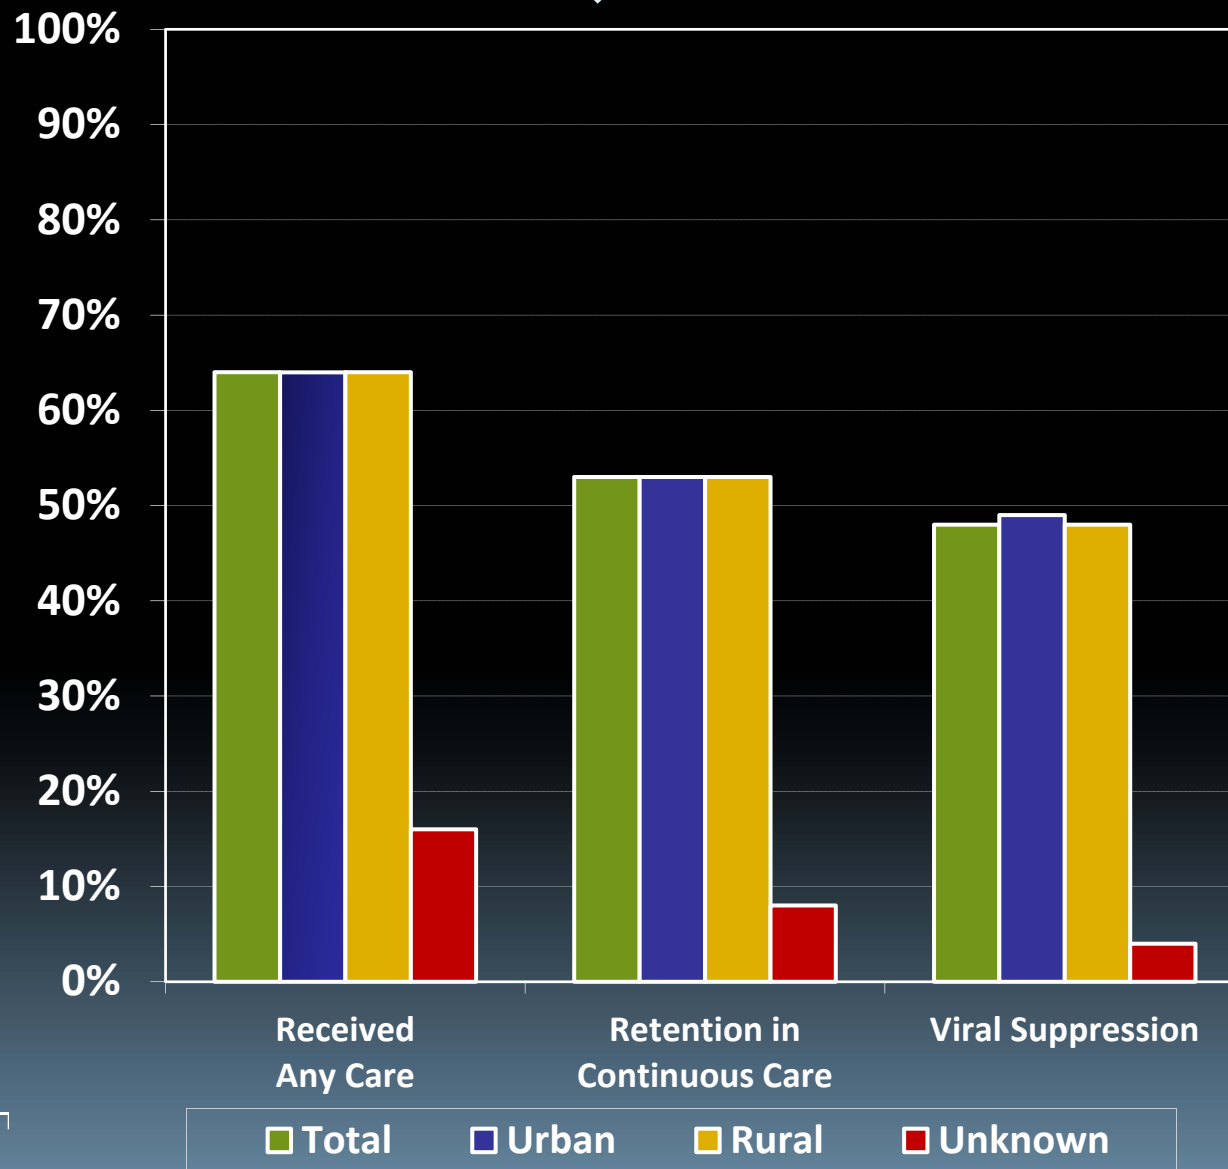

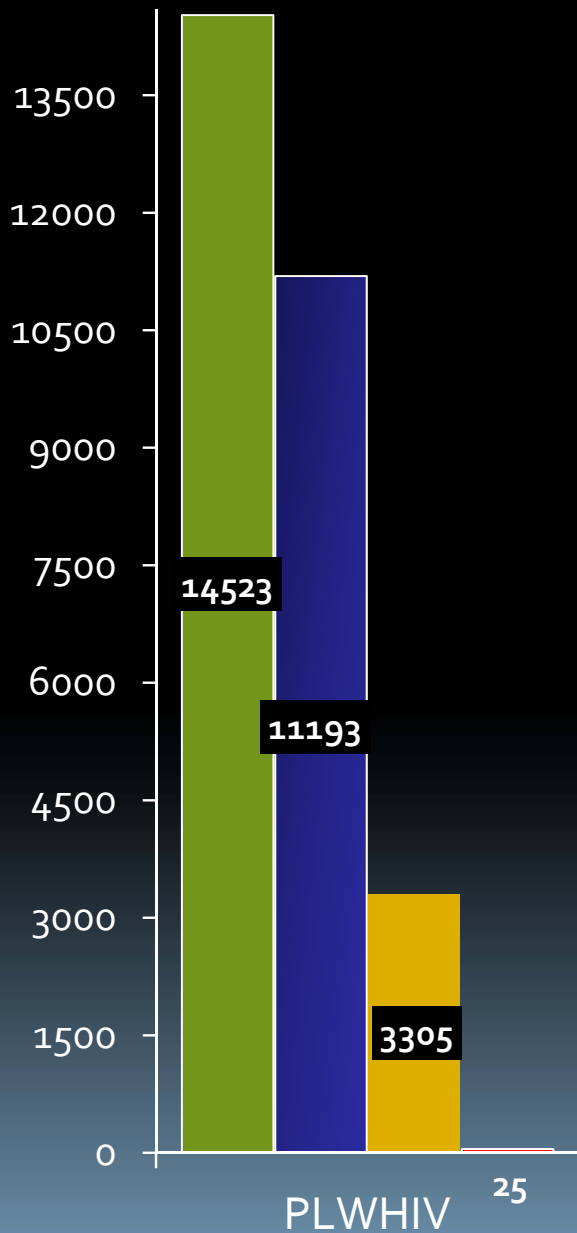

Babatunde Edun MD; Helmut Albrecht MD; Sharon Weissman MD

HIV/HCV Summit

Methods

- PLWHIV with at least one CD₄ count or viral load measurement during 2012 were considered to have received any care
- Those with 2 or more CD₄ counts and/or viral load measurements taken at least 3 months apart in 2012 were considered to be retained in care
- Virologic suppression was defined as a viral load measurement in 2012 of ≤ 200 copies per milliliter
- Rural versus urban status was determined based on residence at diagnosis using the standard Office of Management and Budget (OMB) definition

Percentages of PLWHIV Engaged in each Step of the Continuum of HIV Care by Residence at Diagnosis (OMB Classification)

Numbers and Percentages of People Diagnosed in 2012 who were Linked to Care within 3, 6, and 12 Months of Diagnosis
