

# THE BURDEN OF NASH IN PATHOLOGY. HOW TO RECOGNIZE AND HOW TO SCORE ?

Pierre Bedossa

Departement of Pathology, Imaging and Nuclear Medicine

Hôpital Beaujon

University Paris-Diderot – Paris

FRANCE

# THE BURDEN OF NASH IN PATHOLOGY. HOW TO RECOGNIZE AND HOW TO SCORE ?

- NASH : a risk factor for development of liver fibrosis, liver-related mortality and overall mortality.
- Non Invasive markers for steatosis and advanced fibrosis but not for NASH
- Liver biopsy remains the only reliable tool for diagnosis of NASH.

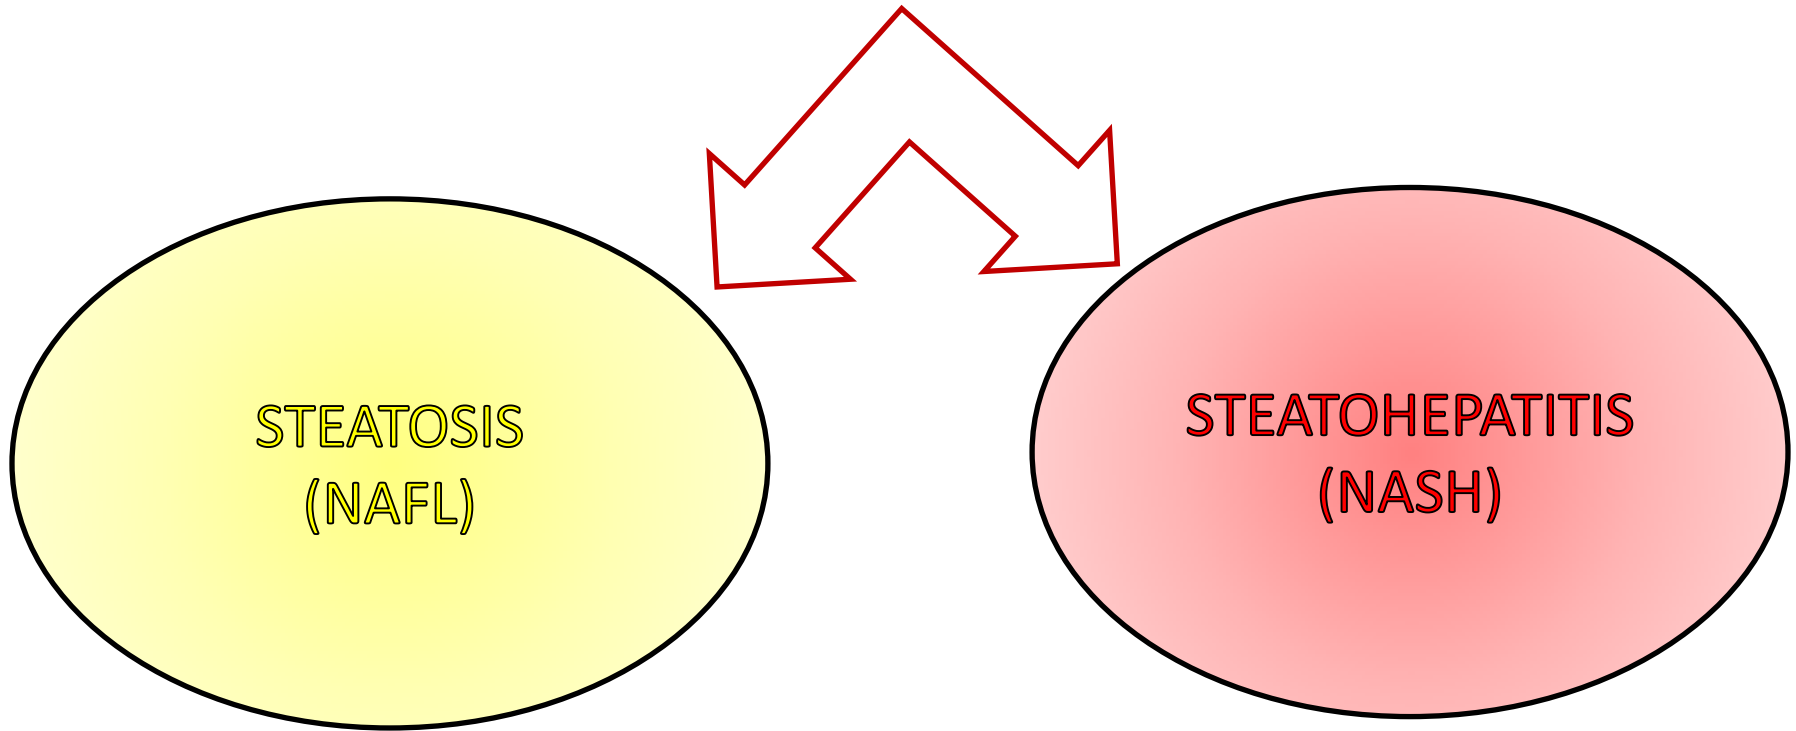

# THE BURDEN OF NASH IN PATHOLOGY. HOW TO RECOGNIZE AND HOW TO SCORE ?

## 1- NASH: HOW TO RECOGNIZE ?

# QUESTION TO PATHOLOGIST : IS IT A NASH ?

NAFLD: A DICHOTOMOUS CLASSIFICATION

## HISTORICAL LANDMARKS :

- Nonalcoholic steatohepatitis: Mayo Clinic experiences with a hitherto unnamed disease. Ludwig J, et al. Mayo Clin Proc. 1980
- Brunt E. et al. Am J Gastroenterol 1999
- Matteoni et al. Gastroenterology 1999

STEATOSIS (NAFL)

STEATOHEPATITIS (NASH)

# DEFINITION : AN HISTOLOGICAL PATTERN

STEATOHEPATITIS (NASH)

DEFINITION : AN HISTOLOGICAL PATTERN

DEFINITION : AN ASSOCIATION OF 3 FEATURES

Steatosis

Ballooning/clarification

Lobular inflammation

Zone 3

Mallory Denk body

Apoptotic body

NOT CONSTANT

Portal Inflammation

Perisinusoidal fibrosis

# HISTOLOGIC CRITERIA FOR NASH DIAGNOSIS

An association of 3 elementary features

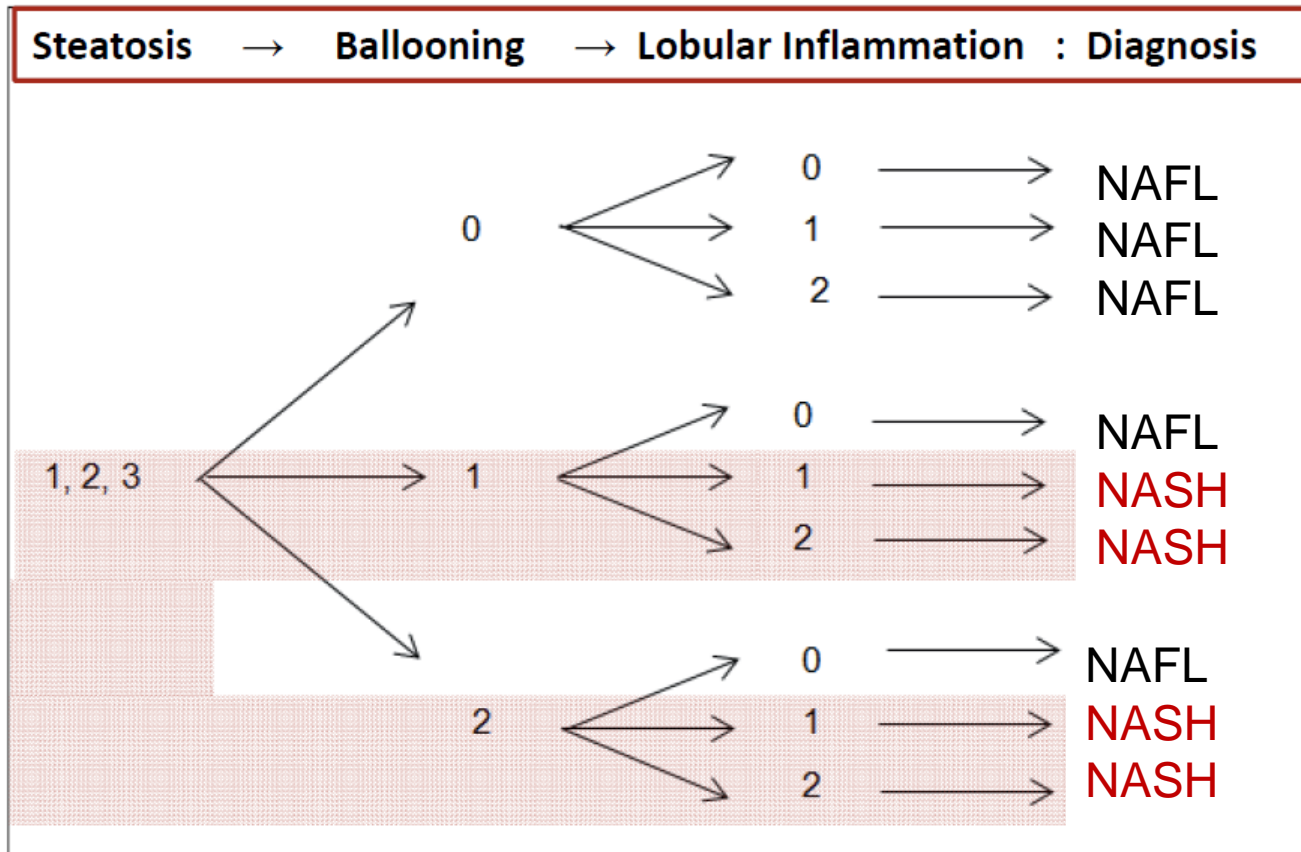

# HEPATOCELLULAR BALLOONING: THE HALLMARK OF NASH

## SHAPE + COLOR + SIZE

# The FLIP algorithm

*Histopathological algorithm and scoring system for evaluation of liver lesions in morbidly obese patients. Bedossa P, Poitou C, Veyrie N, Bouillot JL, Basdevant A, Paradis V, Tordjman J, Clement K. Hepatology. 2012 Nov;56(5):1751-9*

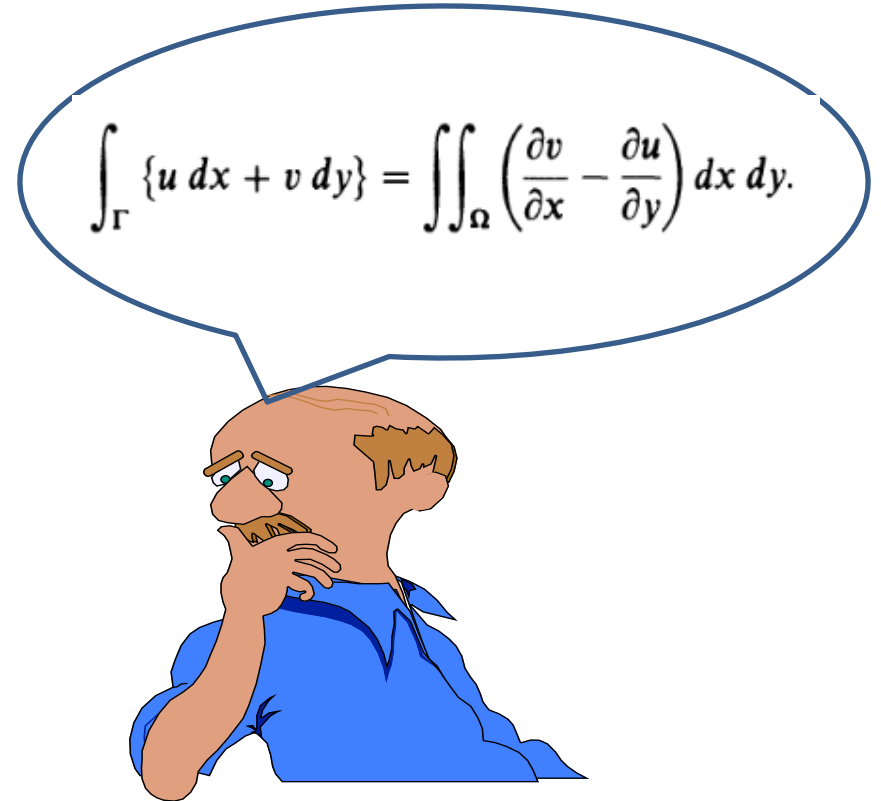

# REPRODUCIBILITY OF DIAGNOSIS OF NASH WITH FLIP ALGORITHM

40 biopsies (Steatosis, NASH)	1st session (unsupervised)	2 <sup>nd</sup> session (with classifier)
<b>Liver Pathologists (n=6)</b>		
• $\kappa$ score	<b>0.54 (moderate)</b>	<b>0.66 (substantial)</b>
• Nbr of biopsies with agreement between all pathologists	26/40 (65 %)	34/40 (85 %)
<b>General Pathologists (n=10)</b>		
• $\kappa$ score	0.35 (fair)	<b>0.70 (substantial)</b>
• Nbr of biopsies with agreement between all pathologists	18/40 (45 %)	34/40 (85 %)

*The FLIP Pathology consortium, Hepatology 2014*

The definition of NASH by an association of 3 features and a clear definition of each of them make the diagnosis of NASH strongly reproducible
